Introduction to management.

CRYSTAL

Historical background:-

Early management practices were used in ancient civilizations to complete large project. Egypt used management build pyramids, China used to build it the Great wall, and Venetians used floating warships assembly line. These examples shows that management has existed for long time.

Adam Smith:-

Adam Smith published the wealth of nations in 1776. He supported the division of labour which means dividing a job into smaller tasks and assigning them to different workers. This increase worker productivity and help them work more efficiently.

Industrial revolution:-

The industrial revolution took place from 1750 to 1850. During this period machines began to replace human labour in many tasks. It also led to creation of large organizations that needed management

Scientific management — Frederick Winslow Taylor:-

Frederick Winslow Taylor is known as the father of scientific management. He published the principles of scientific management in 1911. and suggested using scientific method to find

Date .....

CRYSTAL

the best way to perform a job. He emphasized selecting the right worker, providing suitable tools, using standard methods and offering financial incentives.

Taylor's Scientific management principles:- Tylor's presented four main principles to improve work performance:-

1) Develop a scientific method for every job instead of using old-fashioned guess work.
2) Select, train, teach and develope workers scientifically.
3) Cooperate with workers so they follow the developed method.
4) Divide work and responsibility between managers and workers according to their abilities.

Scientific management — Frank and Lillian Gilbreth:- Frank and Lillian Gilbreth focused on increasing worker productivity by reducing unnecessary movements. They developed the microchronometer to measure the time taken by workers movement. This helped them improve work methods and make tasks more efficient.

How today's managers use scientific management:-

Today's Manager use scientific method to improve productivity and efficiency. They study the time and movements required for tasks hire the best qualified employees and design incentive systems based on output. These methods help improve employees performance.

General administrative theory — Henry Fayol:-

Henri fayol believed that management is a separate function from other organizational activities. He developed general principles of management that could be applied to different types of organizations. His idea focused on improving how organization are managed.

Fayol 14 principles of management:-

1) Division in labour :- Divide work into specialized task.
2) Authority :- Manager should have the power to give order.
3) Discipline :- Employees should follow rules
4) Unity of command :- Each employee should receive orders from one manager
5) Unity of direction :- Activities with same goal should follow one plan
6) Subordination of individual work :- Organizational interests should come before personal interests.
7) Remuneration :- Employees should receive fair payement.
8) Centralization :- Decide how much authority should remain at top.

CamScanner

CRYSTAL

9) Scalar chain :- Follow the formal line of authority.
10) Order :- Keep people and material in their proper place.
11) Equity :- Treat employees fairly.
12) Stability of tenure :- Provide employees with job stability.
13) Initiative :- Encourage employees to suggest and implement ideas.
14) Espirit de corps :- Promote teamwork and unity among employees.

General administrative theory — Max Weber :-

Max Weber developed a theory of authority based on an ideal type of organization called bureaucracy. He emphasized control through knowledge, experties and experience.

Weber's bureaucracy :- Weber's bureaucracy describe an organization with clear rule and responsibilities and authority. Its main feature include hiring based on qualifications, promotion based on merit, chain of command, division of labour, fair application of

Quantitative approach :- The quantitative approach is also called operation research. It developed from mathematical and statistical methods used to solved military logistic, quality-control problem during world war II. It help manager make decision better. using statistics, informational model and computer simulation.

Quality management :- Quality management focuses on satisfying customers and continuously improving organizational performance. It emphasize improving processes and quality of everything the organization does. It also involve accurate measurement and empowering employees to contribute quality improvement.

Introduction to management.

CRYSTAL

System approach:- A system is a group of connected and dependent parts that work together to achieve one common purpose. In simple words different parts work together to make one complete thing.

Basic types of system:- Basic types of system:-

i) Closed system.

ii) Open system.

Closed system:- Closed system is a system that does not interact with or get influenced by its external environment. In simple words it works internally and does not exchange inputs or outputs with outside environment.

Open system:- An open system is a system that interact with its external environment. It takes inputs from the environment changes those inputs into outputs and send the output back to environment.

Implications of system approach:- The system approach has three important implications for managers:-

1) Coordinating between organizational parts
2) Decisions in one area affect other areas.
3) Organizations must adapt to external environmental changes.

Contingency approach:- The contingency approach is also known as situational approach.

It means that there is no single management method or rules that works perfectly for every organization and every situation.

A manager should choose the management method according

Date .....
S M T W TH F S

CRYSTAL

the situation. Different organizations face different problems so they need different management style.

Important points of contingency approaches:-

1) Management is harder than it looks.
2) Managers must identify important changes in situation.
3) Analyze problems before taking action.
4) Pay attention to words like "Usually".

Key Contingency Variables:- The four key contingency variables are:-

1) Organization Size.
2) Routineness of Task Technology.
3) Environmental Uncertainty
4) Individual Difference.

Current trends and issues in management:-

1) Globalization:- Globalization means doing business and managing organizations at an international level rather than only within one country.

- Political and cultural challenges of operating in global market.
- Working with people from different cultures.

2) Ethics:- Ethics means the moral principles and rules that help people decide what is right and wrong. In business ethics means treating employees, customers and other people honestly and fairly.

- Increased creation and use of codes of ethics by businesses.

Date .....
